

Leather Care Instructions

1. CLEANING

Brush the leather using a soft or medium bristle brush to remove any dust. Use warm water and a soft or medium bristle brush to apply 2Bwax Leather Cleaner. Scrub the leather gently in a circular motion to create lather. The gentle brushing will lift the contaminants and dirt up. Wipe away with a clean damp cloth. Rinse your cloth and repeat the wiping process. Repeat the above steps as many times as necessary. If your leather includes embroidery we recommend being gentle on the threads to prevent tearing or breaking them.

2. DRYING

Allow the leather to dry at room temperature (75F +/- 5F) overnight in a dry environment. Always avoid direct heat or sunlight. **DO NOT** use blow dryers, heat guns, ovens or microwaves to expedite the drying process

3. CONDITIONING

Proper conditioning helps preserve and restore the finish and life of your leather. Apply 2Bwax All Natural Leather Conditioner with your fingers, soft cloth or sponge. Apply a thin layer of our conditioner and allow the leather to absorb prior to re-applying. If the leather is weathered or aged, multiple applications will be required to achieve desired results. Allow the leather to dry a minimum of 60 minutes prior to buffing. Buff gently with flannel cloth or a horse hair brush.
